Abstract of the Disclosure

An apparatus in a vehicle (1) for producing and wirelessly transmitting messages to vehicles (11) which are set up to receive such messages, having a communication device (2) and an activation device (3), where activation by the activation device (3) is used to transmit messages from the communication device (2) which includes at least information about the position and speed of the vehicle (1). The communication device (2) is part of a unit (5) in the vehicle for determining road tolls. The activation device (3) is a direction-of-travel indicator operating element, and the messages are sent to the vehicles (11) from the communication device (2) using a control center (6) which is set up to manage road tolls.
